

No Swirls

Removes Road Film

Restores Finish

tech sheet

One Step Clean & Polish

The same easy-to-use formula as Finish Restorer with an added abrasive for more cutting and polishing ability. Fast 'n Brite cleans paint using a unique blend of surfactants, abrasives and polishing agents. Very easy, user-friendly formula contains reactive silicone polymers for longevity.

Removes medium to heavy oxidation and scratches. Great alternative to One Shot for a more swirl free finish.

One Step Clean & Polish's neutral pH formula will not "track" or stain paint and is very easy to clean up.

Special Tips and Precautions

- As with all polishes, be sure painted surfaces are cool to the touch before applying product.
- Use with a cutting, lamb's wool or foam pad at various buffer speeds to achieve the cutting/polishing combination desired.
- If the customer uses too much product they may complain of excessive dust. Remind them to use about 30% less product than they are accustomed to.
- Because the heat and friction of the buffer generate the "flattening" process, pad types and buffer speed will change the amount of time it takes to get to a glossy finish.
- It is important to continue to buff in small sections and to work the product through its full cycle. Stopping prematurely may result in unsatisfactory results.

Key Features

- Produces a very bright, deep finish.
- More aggressive than Finish Restorer.
- Removes road film, oxidation and medium to heavy scratches without leaving swirls.
- Very easy clean up.
- Good longevity, three to six months.
- Very fast and easy to use.
- Perfect for auctions and recon centers.
- Neutral pH. Will not "track" or stain paint.
