Nano Liquid glass protector

Nano Liquid Glass Protector is a unique, long-lasting, polymer coating that creates a hydrophobic (water repellent) surface on glass.

Using propriety nano-chemistry originally developed for the space program, NLGP penetrates deep into the micro crevices of glass; chemically bonding to its surface. This slick, durable coating provides several key benefits others can't.

First, it improves scratch resistance up to 15% more than untreated glass. As a result it also increases your windshield's ability to resist chips and pitting from rocks, sand and other atmospheric debris.

Secondly, its hydrophobic properties boost visibility by reducing glare at night and while driving in the rain.

Thirdly, NLGP last longer than other glass coatings because it chemically bonds to the glass. Under the right environmental conditions it can last up to 4 years. It's simply not affected by detergents, road salt, sand abrasion, wiper agitation and other airborne debris. NLGP will last through hundreds of car washes and years of driving in the rain and heat.

Nano Liquid Glass Protector's formula sets a new standard in glass protection. Don't be fooled by the flammable silicon based products on the market. These simple water repellents that do not bond to the glass and disintegrate after only a few car washes or rain storms.

Directions

1. Wash vehicle with soap and water to remove dirt, grime, and other contaminants.
2. Clean glass using towelette from pouch A. Wipe area with towelette making sure to clean glass thoroughly and allow to dry.
Caution, Only Use Nano Glass Pre-Treatment For Initial Application.
3. Remove towelette from Pouch B.
4. Apply product to entire glass area making sure to apply an even coat to the entire glass surface. Apply using both left / right and up / down motions to apply an even coating to the entire windshield.
5. Before product dries, take a clean, dry, microfiber cloth and buff windshield to a streak-free, slick, shine.

Key Features

- Water Repellent Coating
- Long Lasting Aerospace Formula
- Reduces Night Glare by 34%
- Increases Scratch Resistance up to 15%
- Resist Chips, Pits, Cracks & Breakage
- Snow & Ice are Easily Removed
- Improves Visibility in Rain & Snow
- Water-based, Inflammable Formula
- Environmentally Friendly Product
- Bonds & Cures to Glass
- Reduces Night Glare
- Easy to Install
